SUSPENSION PAVILLON

SUSPENSION PAVILLON in brushed bronze

This suspension is designed to fit into an existing ceiling bracket, which was probably used to hang a chandelier

SUSPENSION PAVILLON consists of a tube with a hook designed to fit the existing ceiling bracket, a pavilion that slides over the tube to hide the tube hook, the electrical connections and the hole in the ceiling. A small screw at the bottom of the pavilion holds it to the tube

SUSPENSION PAVILLON is a suspension where the lampshade is fixed to an E27 fitting by a fixing ring. A 2m long electric cable, adjustable at the time of installation, connects the fitting to the pavilion

There are lampshades called **TOUYA** and **KENTIKA** which can be adapted to this suspension and which can only be placed on an E27 fitting, see our range of LAMPSHADES TO HANG

OVERALL SIZES

Ø7cm H15→208cm

BASE : Ø7cm H6cm

TECHNICAL DATA

This suspension includes :

A tube with a hook to attach to the existing ceiling hook, see image 2
