

MOSQUITO NET

MOSQUITO NET stretched and glued on top of a KENTIKA 70 lampshade

VALID WITH THE INTEGRAL DIFFUSER

The **mosquito net (MOSQUITO NET)** consists of a white fabric stretched and glued to the top of the lampshade. It is the ideal solution to prevent dust and insects from settling on the diffuser

This option is only available on suspended lampshades

To be effective, it should be placed on all cylindrical and straight lampshades with an integral diffuser, whether they are round, square, rectangular or oval

TECHNICAL DATA

The mosquito net consists of a white stretched fabric over the top of the lampshade.

This option is feasible for all cylindrical or right lampshades with an integral diffuser whether round, square, rectangle or oval.

This option is only available for suspended lampshades.
