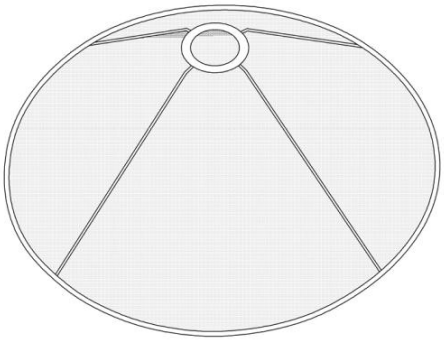
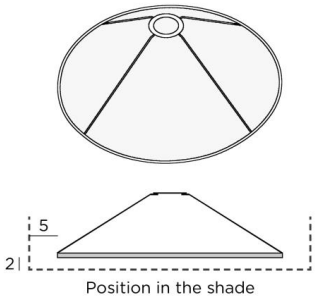
DIFFUSER ATTACHMENT





Diffuser with attachment in Polycristal (material from category 1)

There are four types of diffuser

The **DIFFUSER with ATTACHMENT** can be used for ALL lampshade models, regardless of their shape (ROUND, SQUARE, RECTANGULAR or OVAL)

The main function of the diffuser is to mask the bulb(s) in the shade. In addition, the **Polycristal**, a white, opaline and translucent material that makes up the diffuser, distributes the light over its entire surface to give an even and homogeneous luminosity

We offer three other types of diffuser designed for other shapes of lampshade

TECHNICAL DATA

The placement of this type of diffuser must be on the top side of the lampshade, therefore is incompatible with a lampshade covered with a MOSQUITO NET or a lampshade also placed near the ceiling

It is covered with Polycristal, white and translucent. This material is available in 150cm width maximum
