

DIFFUSER INTEGRAL

Position in the shade

Integral diffuser in Polycrystal (material from category 1)

There are four types of diffuser

The **INTEGRAL DIFFUSER** can only be used for straight cylindrical lampshades, whatever their shape (ROUND, SQUARE, RECTANGLE or OVAL)

The main function of the diffuser is to mask the bulb(s) in the shade. In addition, the **Polycrystal**, a white, opaline and translucent material that makes up the diffuser, distributes the light over its entire surface to give an even and homogeneous luminosity

We offer three other types of diffuser designed for other shapes of lampshade

TECHNICAL DATA

The integral diffuser settles on the bottom of the lampshade.

It is covered with Polycrystal, white and translucent. This material is available in 150cm width maximum
