- Legen Sie die Ring gegen die kleinen Spitzen auf der Innenseite des Spots, vor Installation der Lampe.
- Verwenden Sie GU10 Leuchtmittel mit hoher Intensität (8W - 575 lumen).
- Verwenden Sie nur LED-Lampen.

DEIMOS SPOT

Manufacturer : DAVIDTS LIGHTING – Brussels – Belgium – www.davidts.com

Installation and security instructions (please read and save)

This luminaire is manufactured according to European directives and standards relating to quality and safety of lighting fixtures. A declaration of conformity is available by downloading on our site.

Description of the lighting

Lighting for fixing to the wall or ceiling. More pictures, drawings and complete descriptions are available on our website.

Environmental protection

Our packaging is made from 100% recyclable or re-usable material. For care of the environment please sort or recycle. Fluorescent bulbs and waste electrical equipment should not be disposed of with household waste please take to a recycling facility. This fixture is essentially composed of solid brass. This metal and other elements are fully recyclable. At end of life, if you take the fixture to a recycling facility, each metal will be recovered for new metal production.

Installation of the lighting

This lighting is only intended for indoor use, it must be installed away from moisture, splashing and sources of heat. Suitable for direct mounting on normally flammable surfaces. Before starting the installation, ensure the electrical supply is OFF at the circuit breaker in the consumer unit. Only switching OFF at the wall switch is not adequate. Carefully remove all packaging. All of our fixtures are fixed to the wall or to the ceiling by means of a mounting plate (placement is done by means of screws and dowels, not supplied). Some of our luminaires have more detailed installation instructions (attached to this document). Please read carefully before starting the installation. If you have any doubt about the installation of this lighting, please contact a qualified electrician.

Inserting or replacing a bulb

Always ensure the electrical supply is OFF before this operation. If necessary, let the old bulb to cool for 10 minutes before removing. Place the bulb without forcing into the fitting. Do not directly touch it with the fingers, but with a cloth (fingerprints reduce the lifetime of a bulb). Be always attentive to the choice of a bulb, never exceed the maximum power (W) authorized, indicated on the labels of the light fitting. If an integral LED bulb attached to the fixture is defective, please contact your distributor.

Maintenance of your lighting

Because smoke and dust particles in the air are attracted by a heat source, a deposit will appear on the fixture in the course of time. For maintenance, allow the bulb to cool for at least 10 minutes. Clean the fixture with a paper towel soaked with glass cleaner. Never use solvents, abrasive or corrosive products. Never immerse the fixture in water. If the wires are damaged, they must be replaced by a qualified electrician. This fixture must never be modified as this can make it dangerous to use.
